Abstract

Changed and renewed needs and desires in the market due to changing patterns of social life and economic conditions, technical progress continued, and this requires a sustained effort from the designer, and here is supposed to turn those responsible for the design to take advantage of the areas and modern trends in order to solve the problems facing the user, and these areas multifunctional design.

Although the design multifunctional very old, but it does not shed attention of those responsible for the teaching of design and scientific research, or those responsible for the production of furniture in Egypt.

So, cannot be considered the concept of the traditional design ideal in the future, there is no final design forever, when working on the design of any product, all in addition to the design are important, especially since they added more than one job to furniture design, and an agreement with the dynamic or kinetic environment around us, and the change in the needs, desires and aspirations of the users, and with the continuation of the competition as a distinctive feature of the market, and with our need for growth and progress, highlighting the importance of activating the use and function of multifunctional furniture design and development.

So the search study multifunctionality of furniture, where is the key in the origin of the work to adapt to the multiple needs of the user, the relationship between the effectiveness of the design multifunctional furniture and current reality relationship connected and interrelated and necessary, especially with the economic situation of young people.

Keywords: Multifunctional design, Develop the Egyptian furniture, The teaching of design and scientific research.
