Microsoft Edge

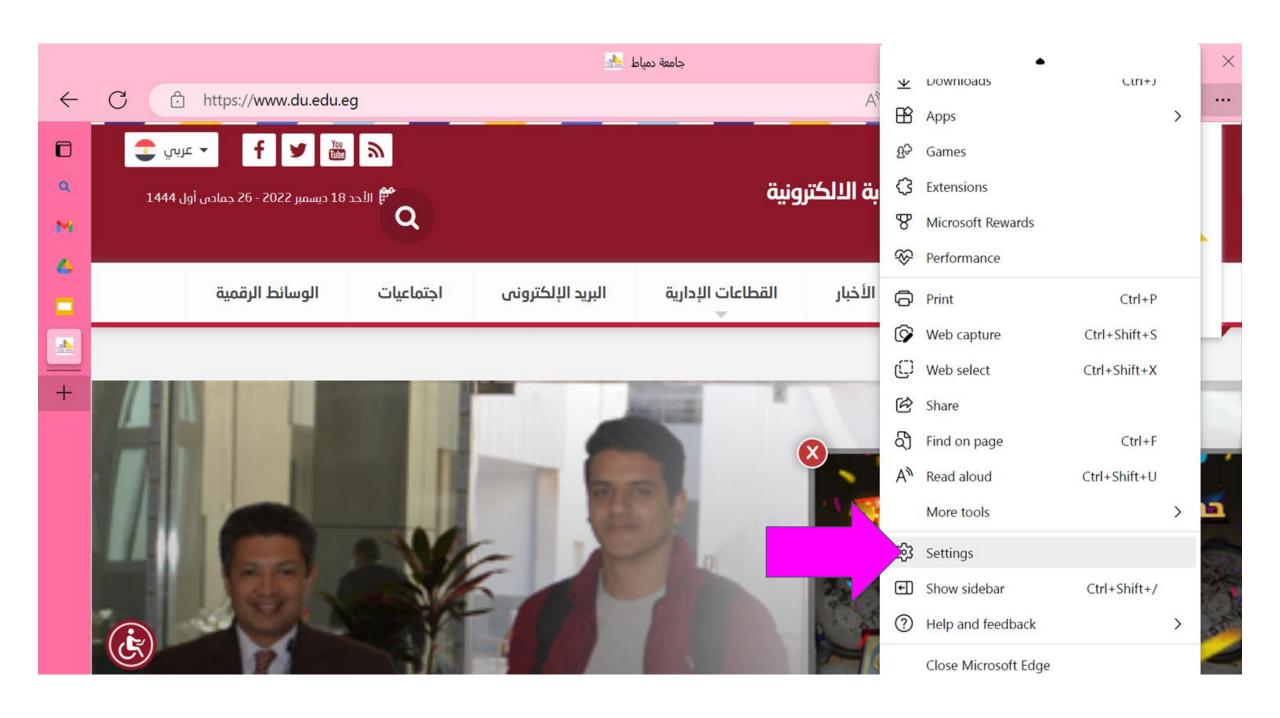

IT unit—- faculty of Agriculture— Damietta University
By Nada Esaa

 Microsoft Edge may have the familiar appearance you've seen before, but don't be fooled, Microsoft has finally rebuilt it's browser from the ground up, and if you're looking to try something other than Chrome, you should definitely check out what new features Edge has to offer.

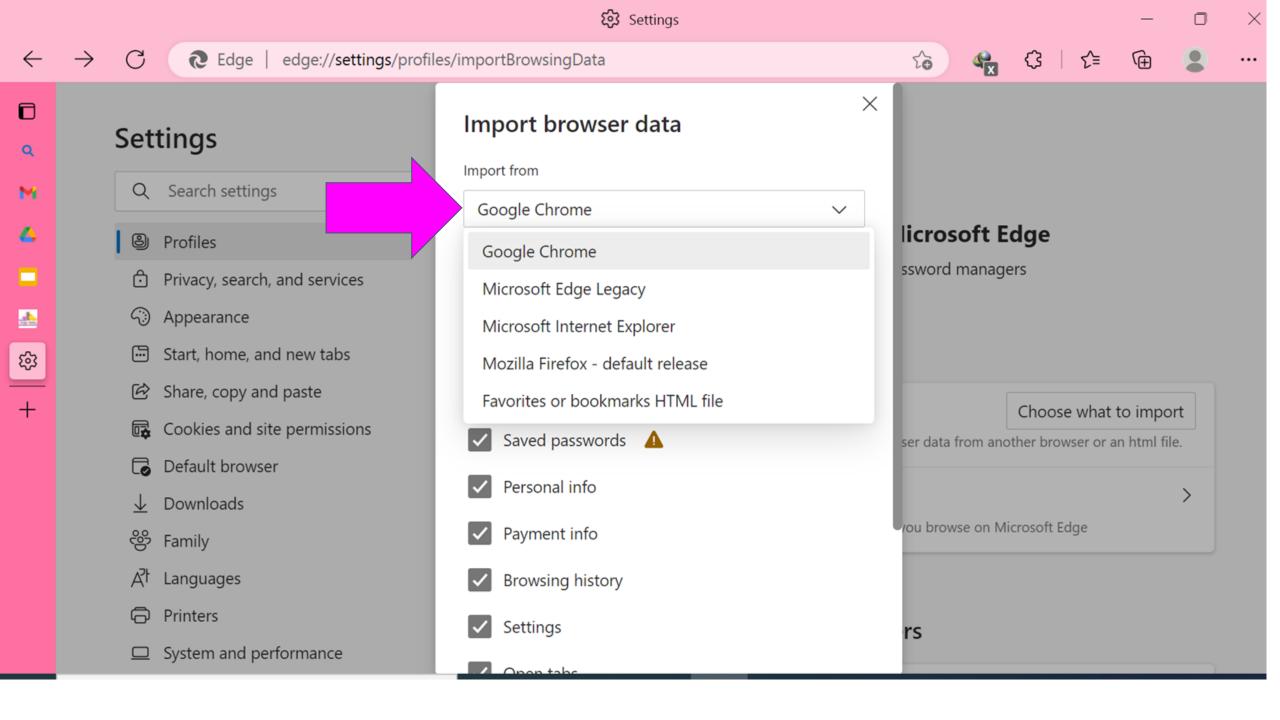

• Instead of relying on it's own web engine, Edge is now powered by the Chromium code base and the Blink web engine, both of which also power Chrome. This change should mean better performance and compatibility with websites.

• 1. Importing Data

- The first time you start up the browser, Edge will offer to import data from Chrome, Firefox, or Safari. Depending on which one you're coming from, that could include bookmarks, passwords, browsing history, settings, and any tabs you have open. This is a lot easier than manually adding everything, and takes the stress out of switching to a new browser.
- If you choose to skip this, you can come back to it later by opening the Edge menu, choosing **Settings**, **Profiles**, and **Import browser data**. Choose the browser you want to get data from, then choose your categories. You can opt to choose or not choose what to bring over.

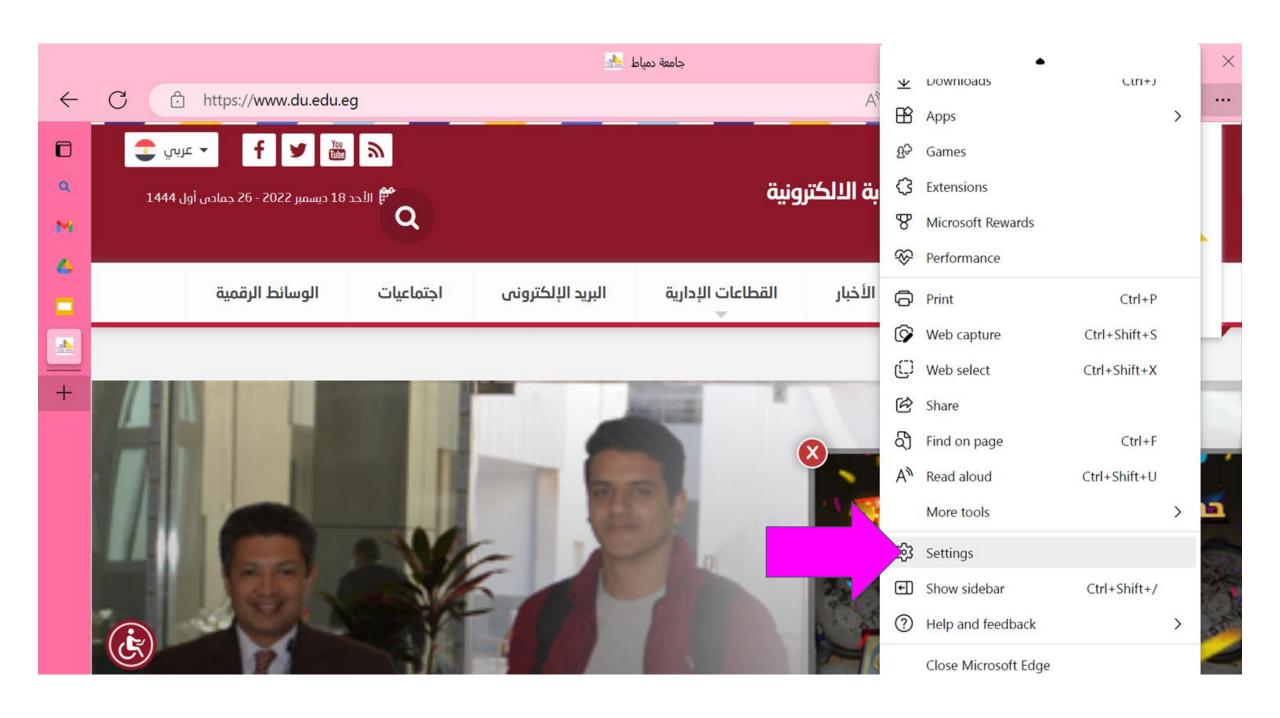

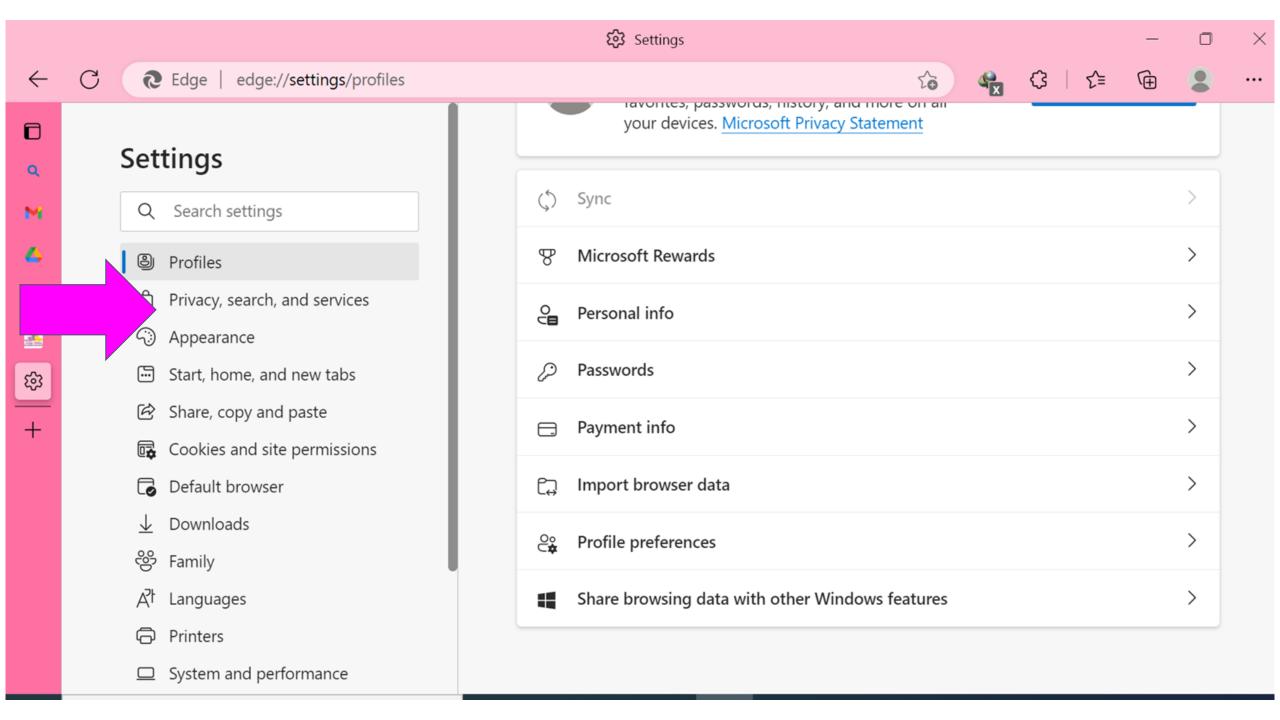

2. Control Your Privacy

 Privacy is very important today, especially online. Microsoft has made the process of choosing these privacy settings easier than ever before. Open the browser menu, click Settings, then choose Privacy and Services to find the three levels of privacy Edge has to offer; Basic, Balanced, or Strict.

Settings

ke personalized ads. Some trackers collect and send your fino to sites you haven't visited

Tracking prevention

Basic

- · Allows most trackers across all sites
- Content and ads will likely be personalized
- · Sites will work as expected
- · Blocks known harmful trackers

Balanced

(Recommended)

- Blocks trackers from sites you haven't visited
- Content and ads will likely be less personalized
- · Sites will work as expected
- · Blocks known harmful trackers

Strict

- Blocks a majority of trackers from all sites
- Content and ads will likely have minimal personalization
- · Parts of sites might not work
- Blocks known harmful trackers

Blocked trackers

View the sites that we've blocked from tracking you

Exceptions

Allow all trackers on sites you choose

Always use "Strict" tracking prevention when browsing InPrivate

• 3. Immersive Reader

 You're trying to read an article, but images clutter the page. Immersive Reader now allows you to simplify the page so you only see the text. You can adjust the colors of the page and the size of the text from the Text Preference box. You can even have the text read aloud to you by clicking on the Read Aloud button.

Enter Reader Mode in Immersive Reader

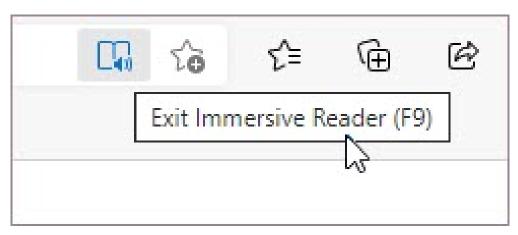

Entering Reader Mode in Immersive Reader will simplify the page you're on by hiding distracting pop-ups and buttons, leaving you with just the important parts: textual and visual content. Once you enter Reader Mode, start using tools like **Read Aloud**, **Text preferences**, **Grammar tools** and **Reading preferences**.

To enter Reader Mode, use Microsoft Edge to visit a website you want to read. Select Enter Immersive

Reader in the address bar or use the keyboard shortcut F9

To exit Immersive reader, select **Exit Immersive Reader** in the address bar or use the keyboard shortcut **F9**.

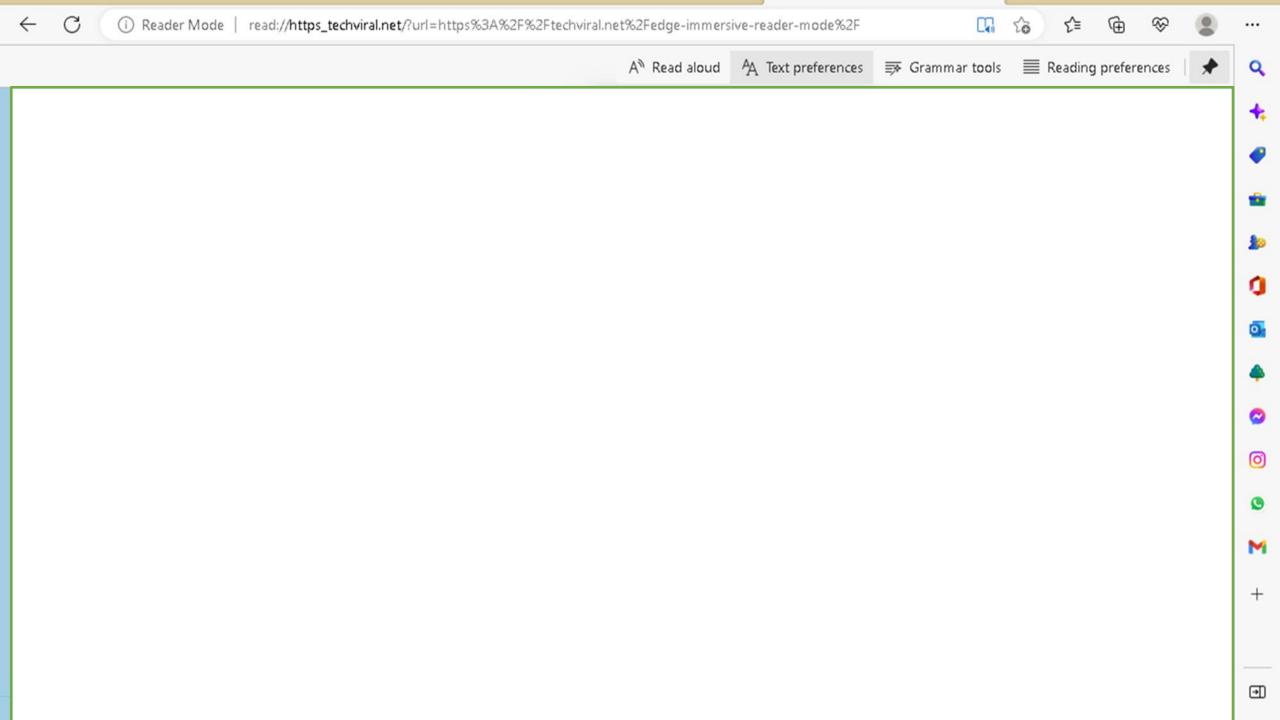

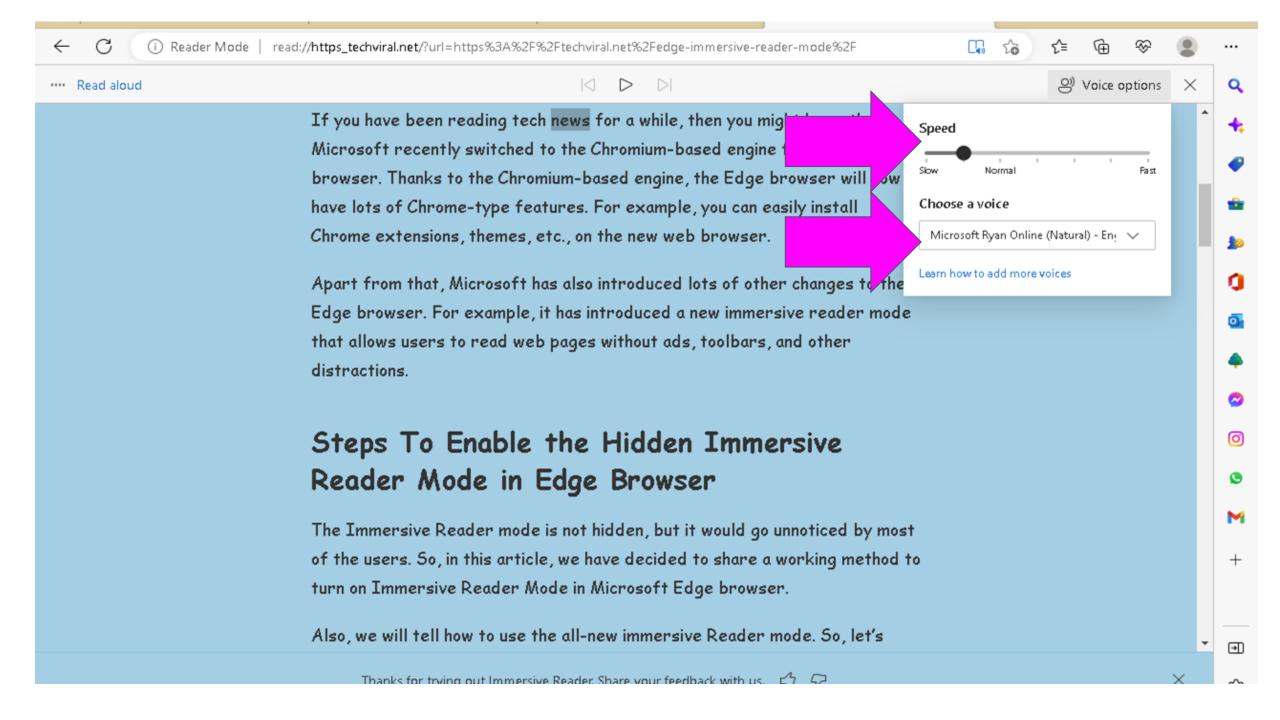

Read Aloud in Microsoft Edge

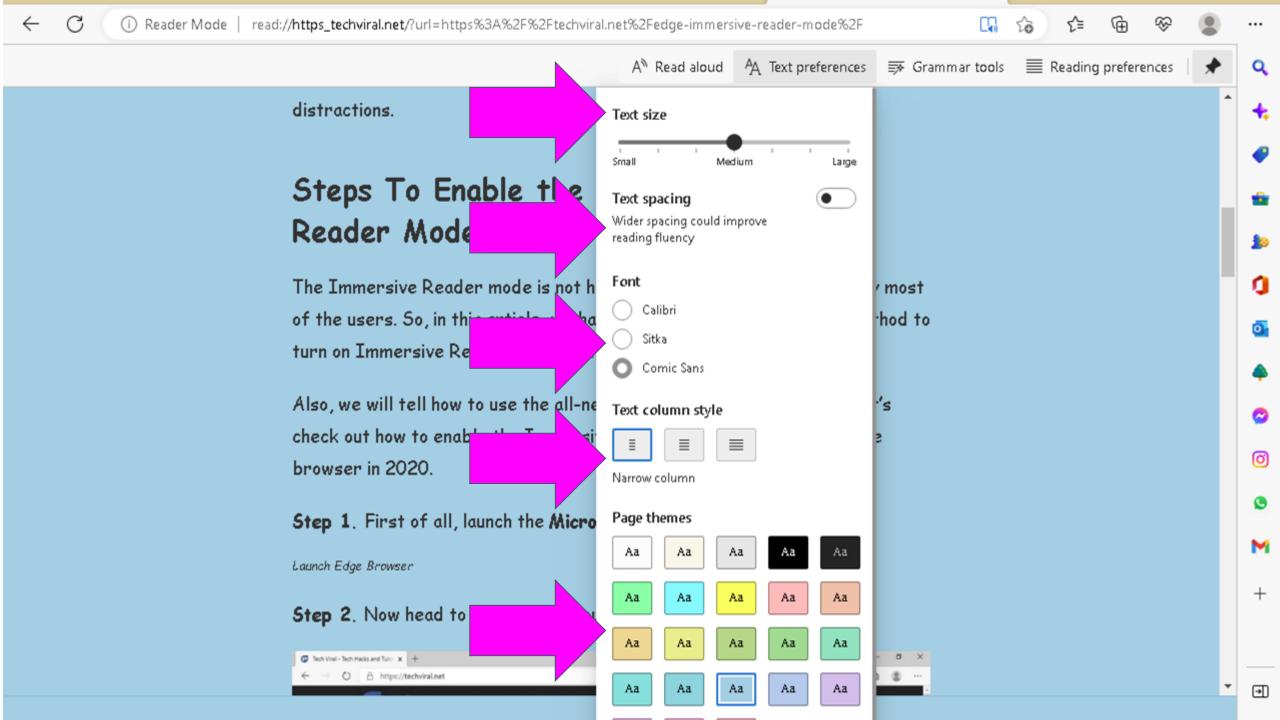

Read Aloud is a simple but powerful tool that reads the text of a web page audibly.

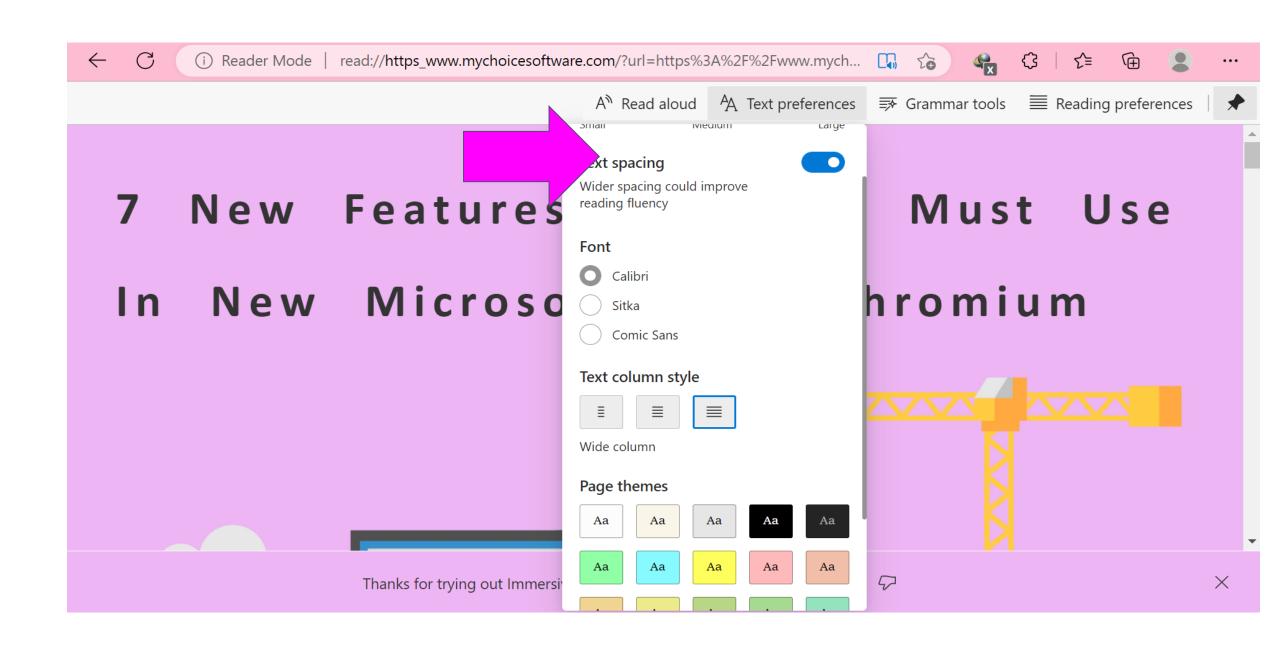

To begin, select **Read Aloud** from the Immersive Reader toolbar. A ribbon toolbar appears at the top of the page after you start Read Aloud. The toolbar includes buttons to play audio, skip to the next or previous paragraph, and adjust Voice options. Voice options allow you to change the reader's voice and slow down or speed up their reading pace.

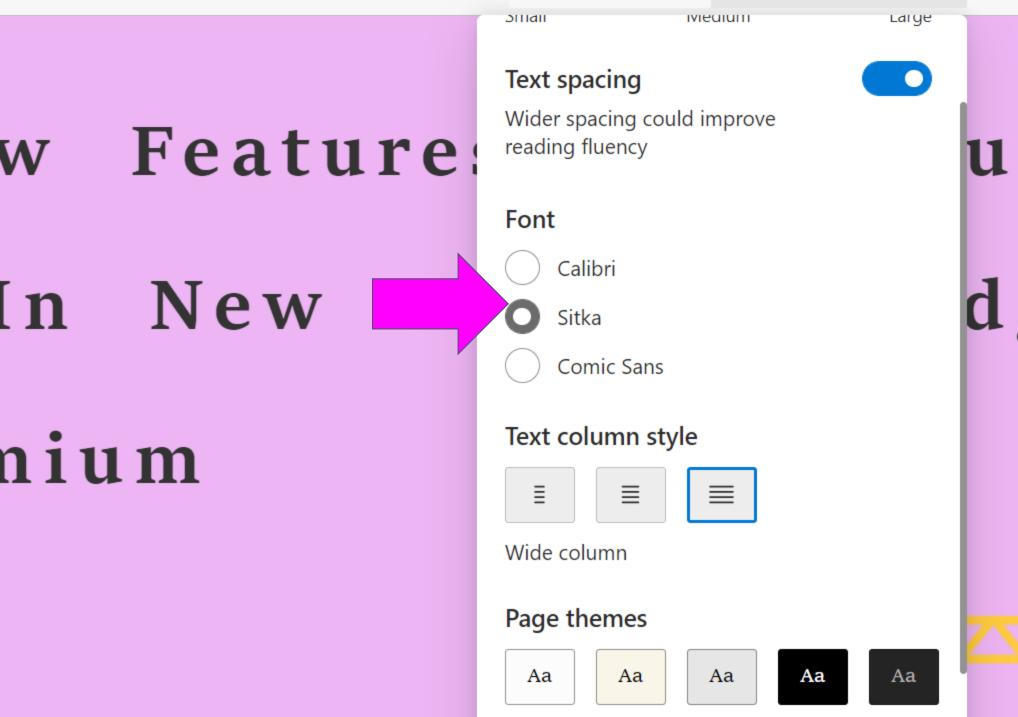

To stop listening, select the **Pause** button or the **X** to close Read aloud.

Multitask on the web

 Easily access the sidebar to hide or show your selected features and multitask faster without breaking your flow.

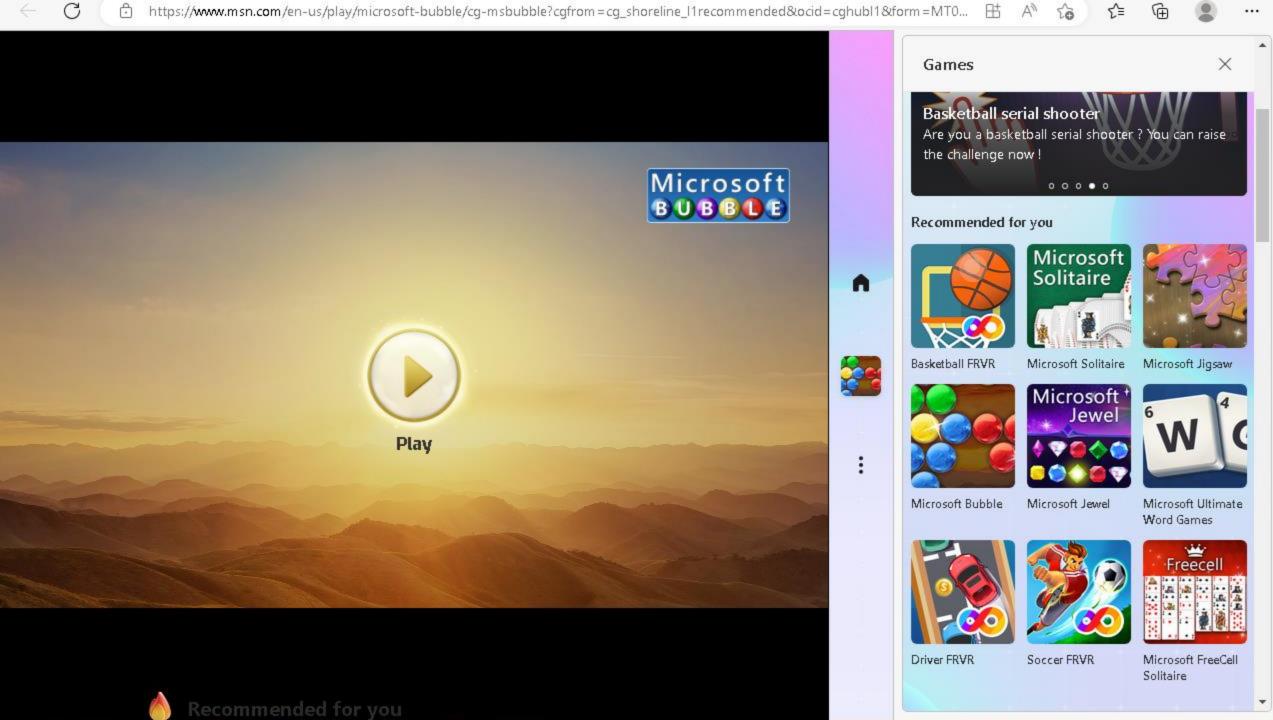

•

- A home page built for gamers
- Microsoft Edge's personalized gaming homepage is built with exclusive Xbox features and curated content tailored to your gaming interests and experiences.

- Achieve more performance
- Microsoft Edge was designed with world class performance and speed from Chromium and is optimized to work best with Windows.

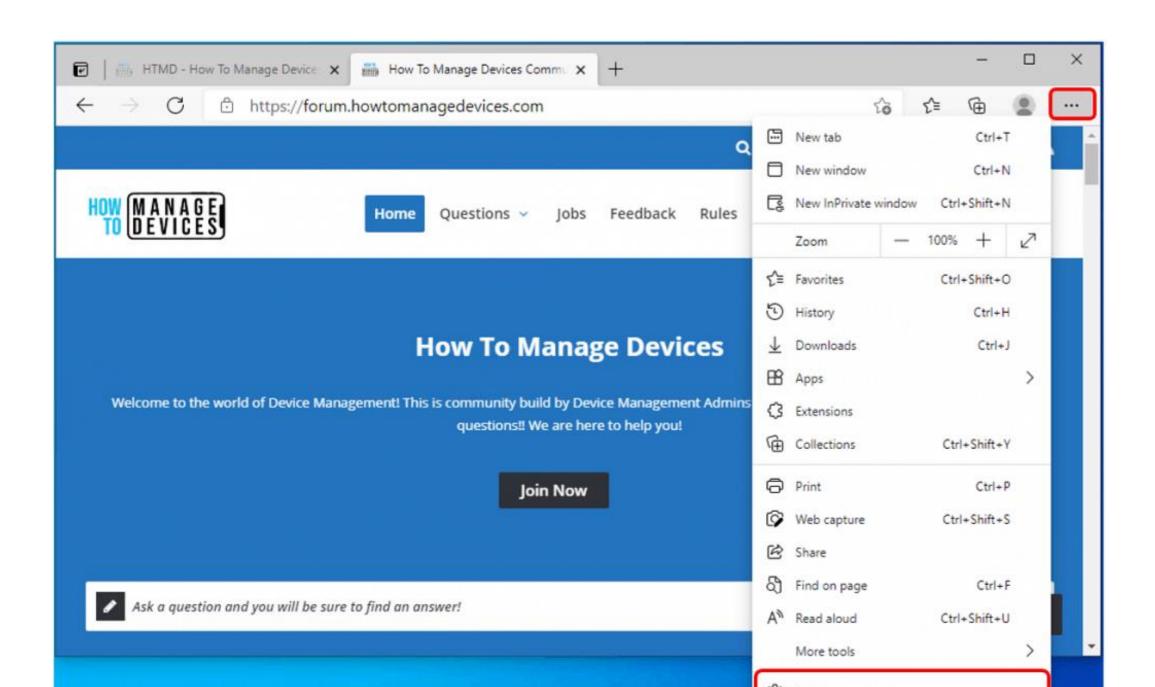

• Tabbed browsing enables users to open multiple website pages in browsers. However, every webpage you open consumes a bit more system resources. Having many page tabs open can considerably increase a browser's RAM and CPU utilization.

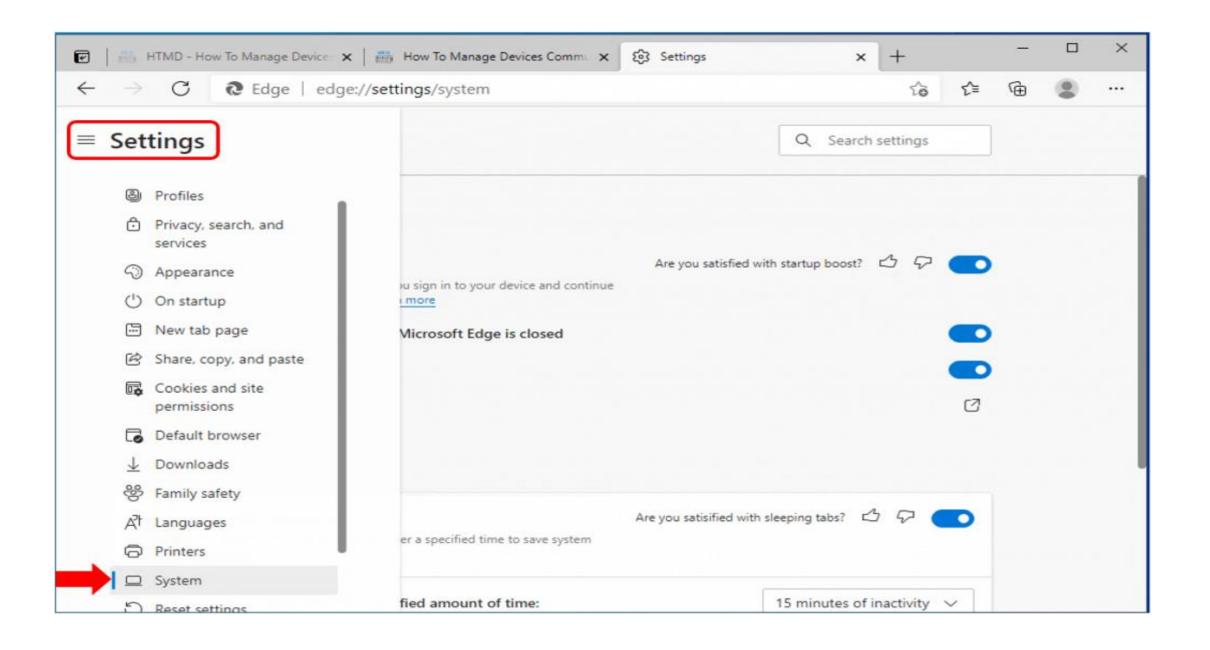

Sleeping tabs

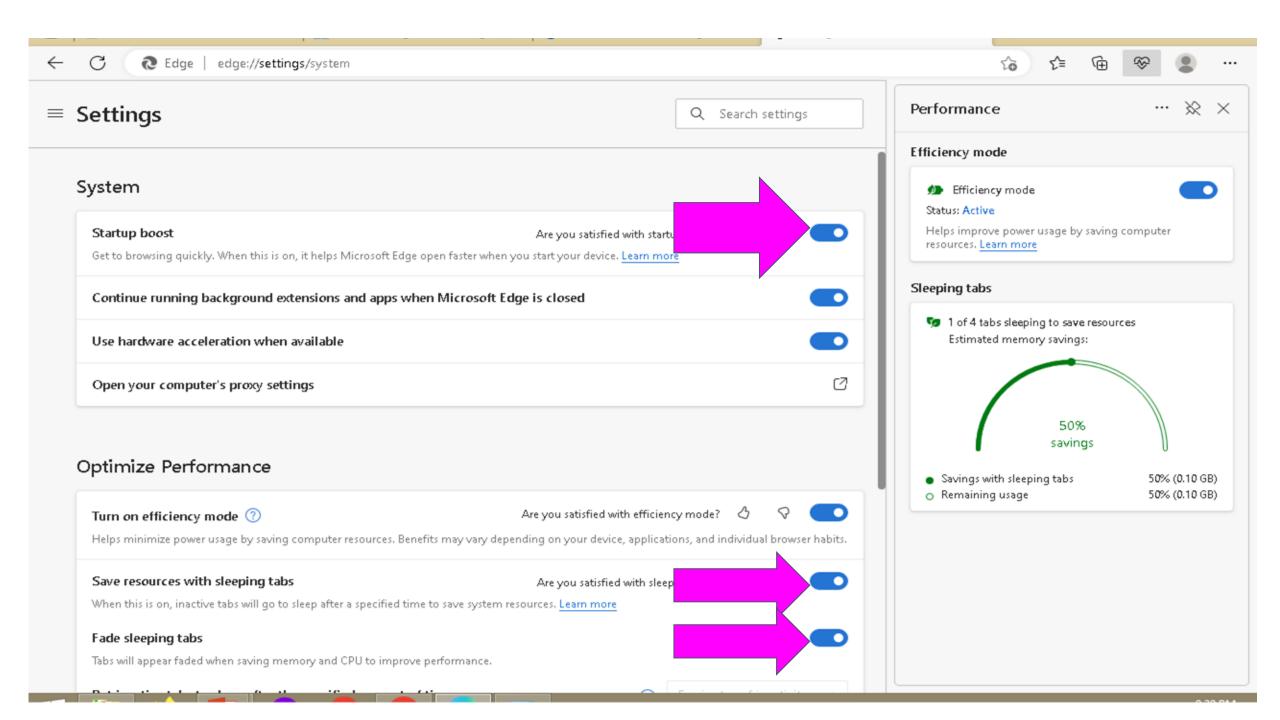

Therefore, some browsers now have sleep tab features that reduce their system resource usage. Edge is one browser that includes such a feature. There are also numerous extensions available for Chromium browsers you can sleep tabs with. This is how you can sleep tabs in Edge with its built-in settings and an additional extension.

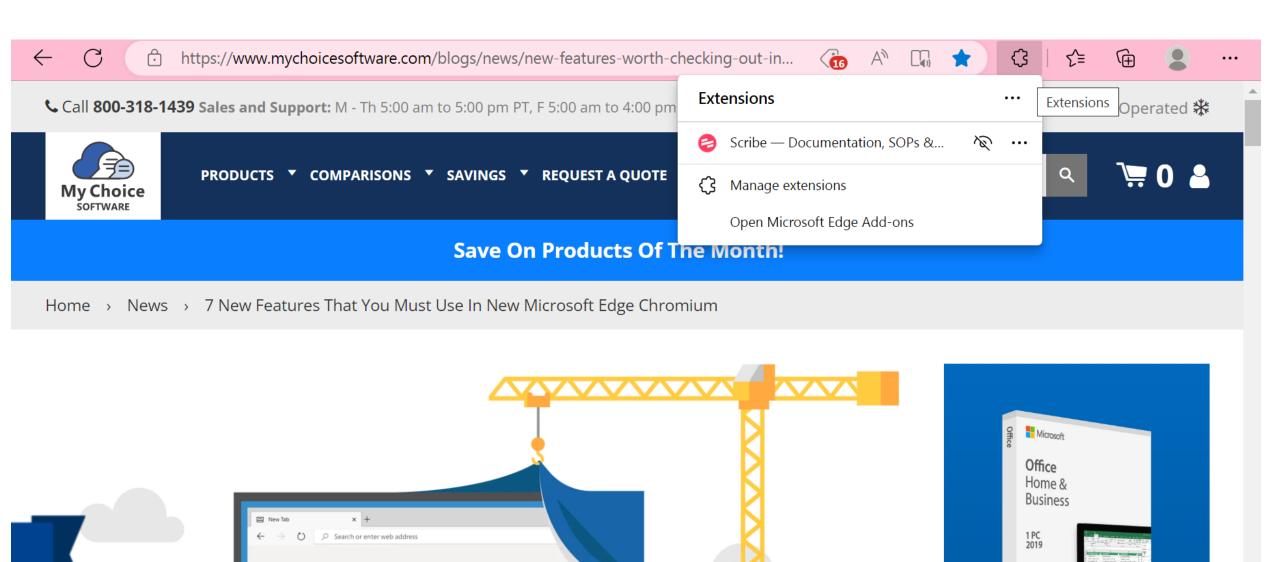

Startup boost

 Microsoft has added a new feature called Startup Boost to improve the Microsoft Edge browser startup speed experience. Startup boost keeps the browser running in the background with minimal processes, so Microsoft Edge will start more quickly when launched from the taskbar, desktop. This feature will help to optimize your browser's performance.

Compatible with your browser

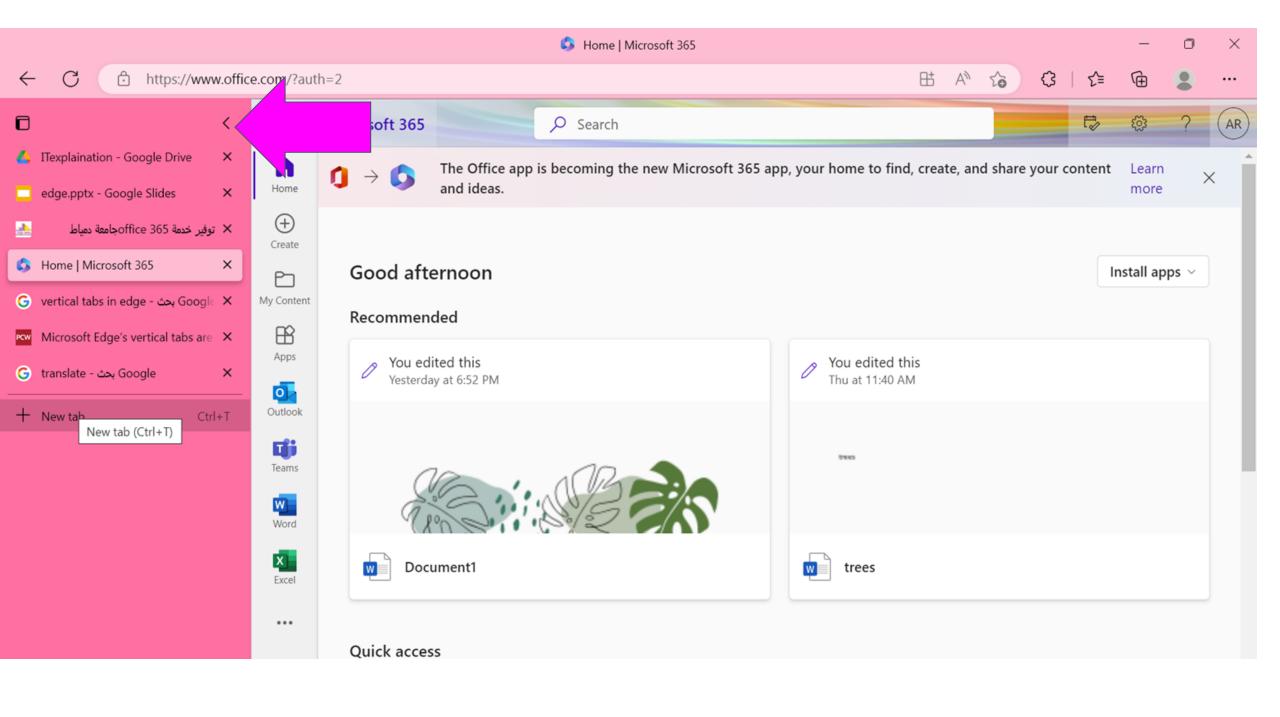

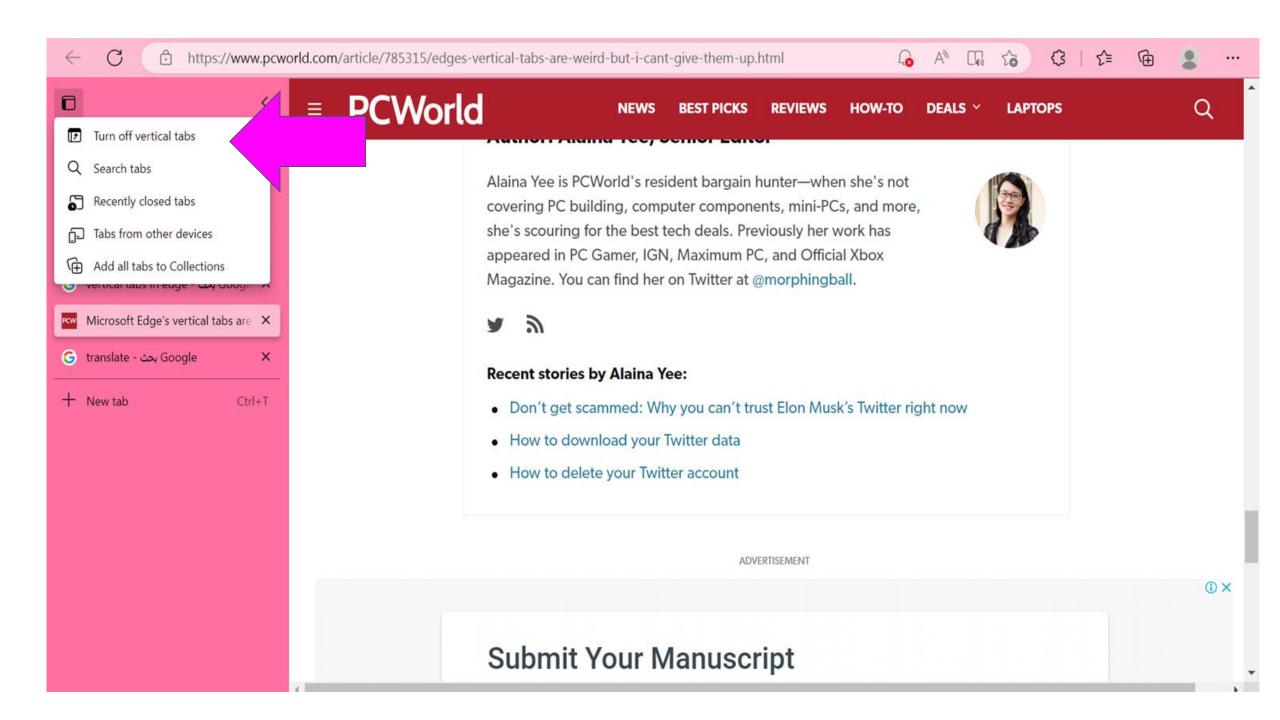

Make the most of your time online

- Microsoft Edge features such as Collections, Vertical Tabs, and Immersive Reader help you organize and get the most of your time while browsing, streaming, searching, sharing and more.
- Microsoft Edge has built-in tools like Collections, vertical tabs and tab groups that help you stay organized and make the most of your time online

Vertical tabs

- Group and collapse your tabs to organize your content and create space to focus on your screen.
- Vertical tabs are also more convenient for keeping track of many tabs while minimizing window clutter. Each tab is reduced to an icon, which you can quickly take in at a glance. And when you hover your mouse over an icon, a bar pops out with the titles of your tabs, making clear what you've got open.
- For starters, switching between vertical and horizontal tabs is fast and simple. Just tap CTRL + SHIFT +, on your keyboard. Alternatively, you can head into Settings and search for the feature, or click the black window icon at the far left of your tab row.

Collections

- Save multiple tabs, organize lists, share content and sync your collections across devices.
- Collections in Microsoft Edge helps you keep track of your ideas on the web, whether you're shopping, planning a trip, collecting notes for research or lesson plans, or just want to pick up where you left off the last time you were browsing the internet. Whatever you're doing on the web, Collections can help.
- Collections syncs across your signed-in devices, so if you use Microsoft Edge on multiple devices, your collections will always be up to date on all of them.

Select **Collections** at the upper-right corner of Microsoft Edge and then **Start new collection**.

To change the title of the collection, select it at the top of the Collections pane.

When you're ready to start adding content to your collection, you can do this in several ways:

- Select Add current page to save an entire webpage to the collection.
- Select and drag an image into the collection.
- Select and drag a link or highlighted text into the collection.

Web capture

- Easily capture and mark up or add comments to your screenshots on webpages, using pen or touch
- When you open web capture, you can use the selection tool to capture just the content you want. We found that sometimes you want more than what you're able to see on the webpage, so we have added the ability for you to select content lower down on the page. To do this, just hold down the selection tool and drag to the bottom of the page; the page will automatically start to scroll so that you can capture everything you need in one go.
- Once you are done with the capture, you will see a menu with a couple of options: 'Copy' and 'Add notes'. Click **Copy** to add the image to your clipboard. It will then be available for you to paste into any application. If you want to mark up the screenshot with inking tools, select the **Add notes** option. You will see the image in a dialog box where you can draw on it, share, save and copy with your annotations.
