الامتحان مكون من ورقتين

The first question: Complete the following tables:

(6 mark)

	Phrase	The article section (other than the Abstract) to which the phrase belongs
1	To evaluate agreement between methods, we used the Wilcoxon signed-rank test, Spearman correlation, and Bland-Altman analysis	
2	enzyme activity was increased up to 140 % in the presence of 20 mM MgCl ₂	
3	This report represents one of the largest single institution series of patients with breast papilloma.	
4	Further studies are required to elucidate the nature of a higher degree of polyunsaturation in the NMR-visible lipid pool upon eLDL loading.	
5	The lysate-Ni-NTA mixture was loaded into a column and washed with ...	
6	Our findings corroborate reports that aprotinin administration increases the risk of postoperative AKI.	

The second question: Rewrite these passive sentences in the active voice:

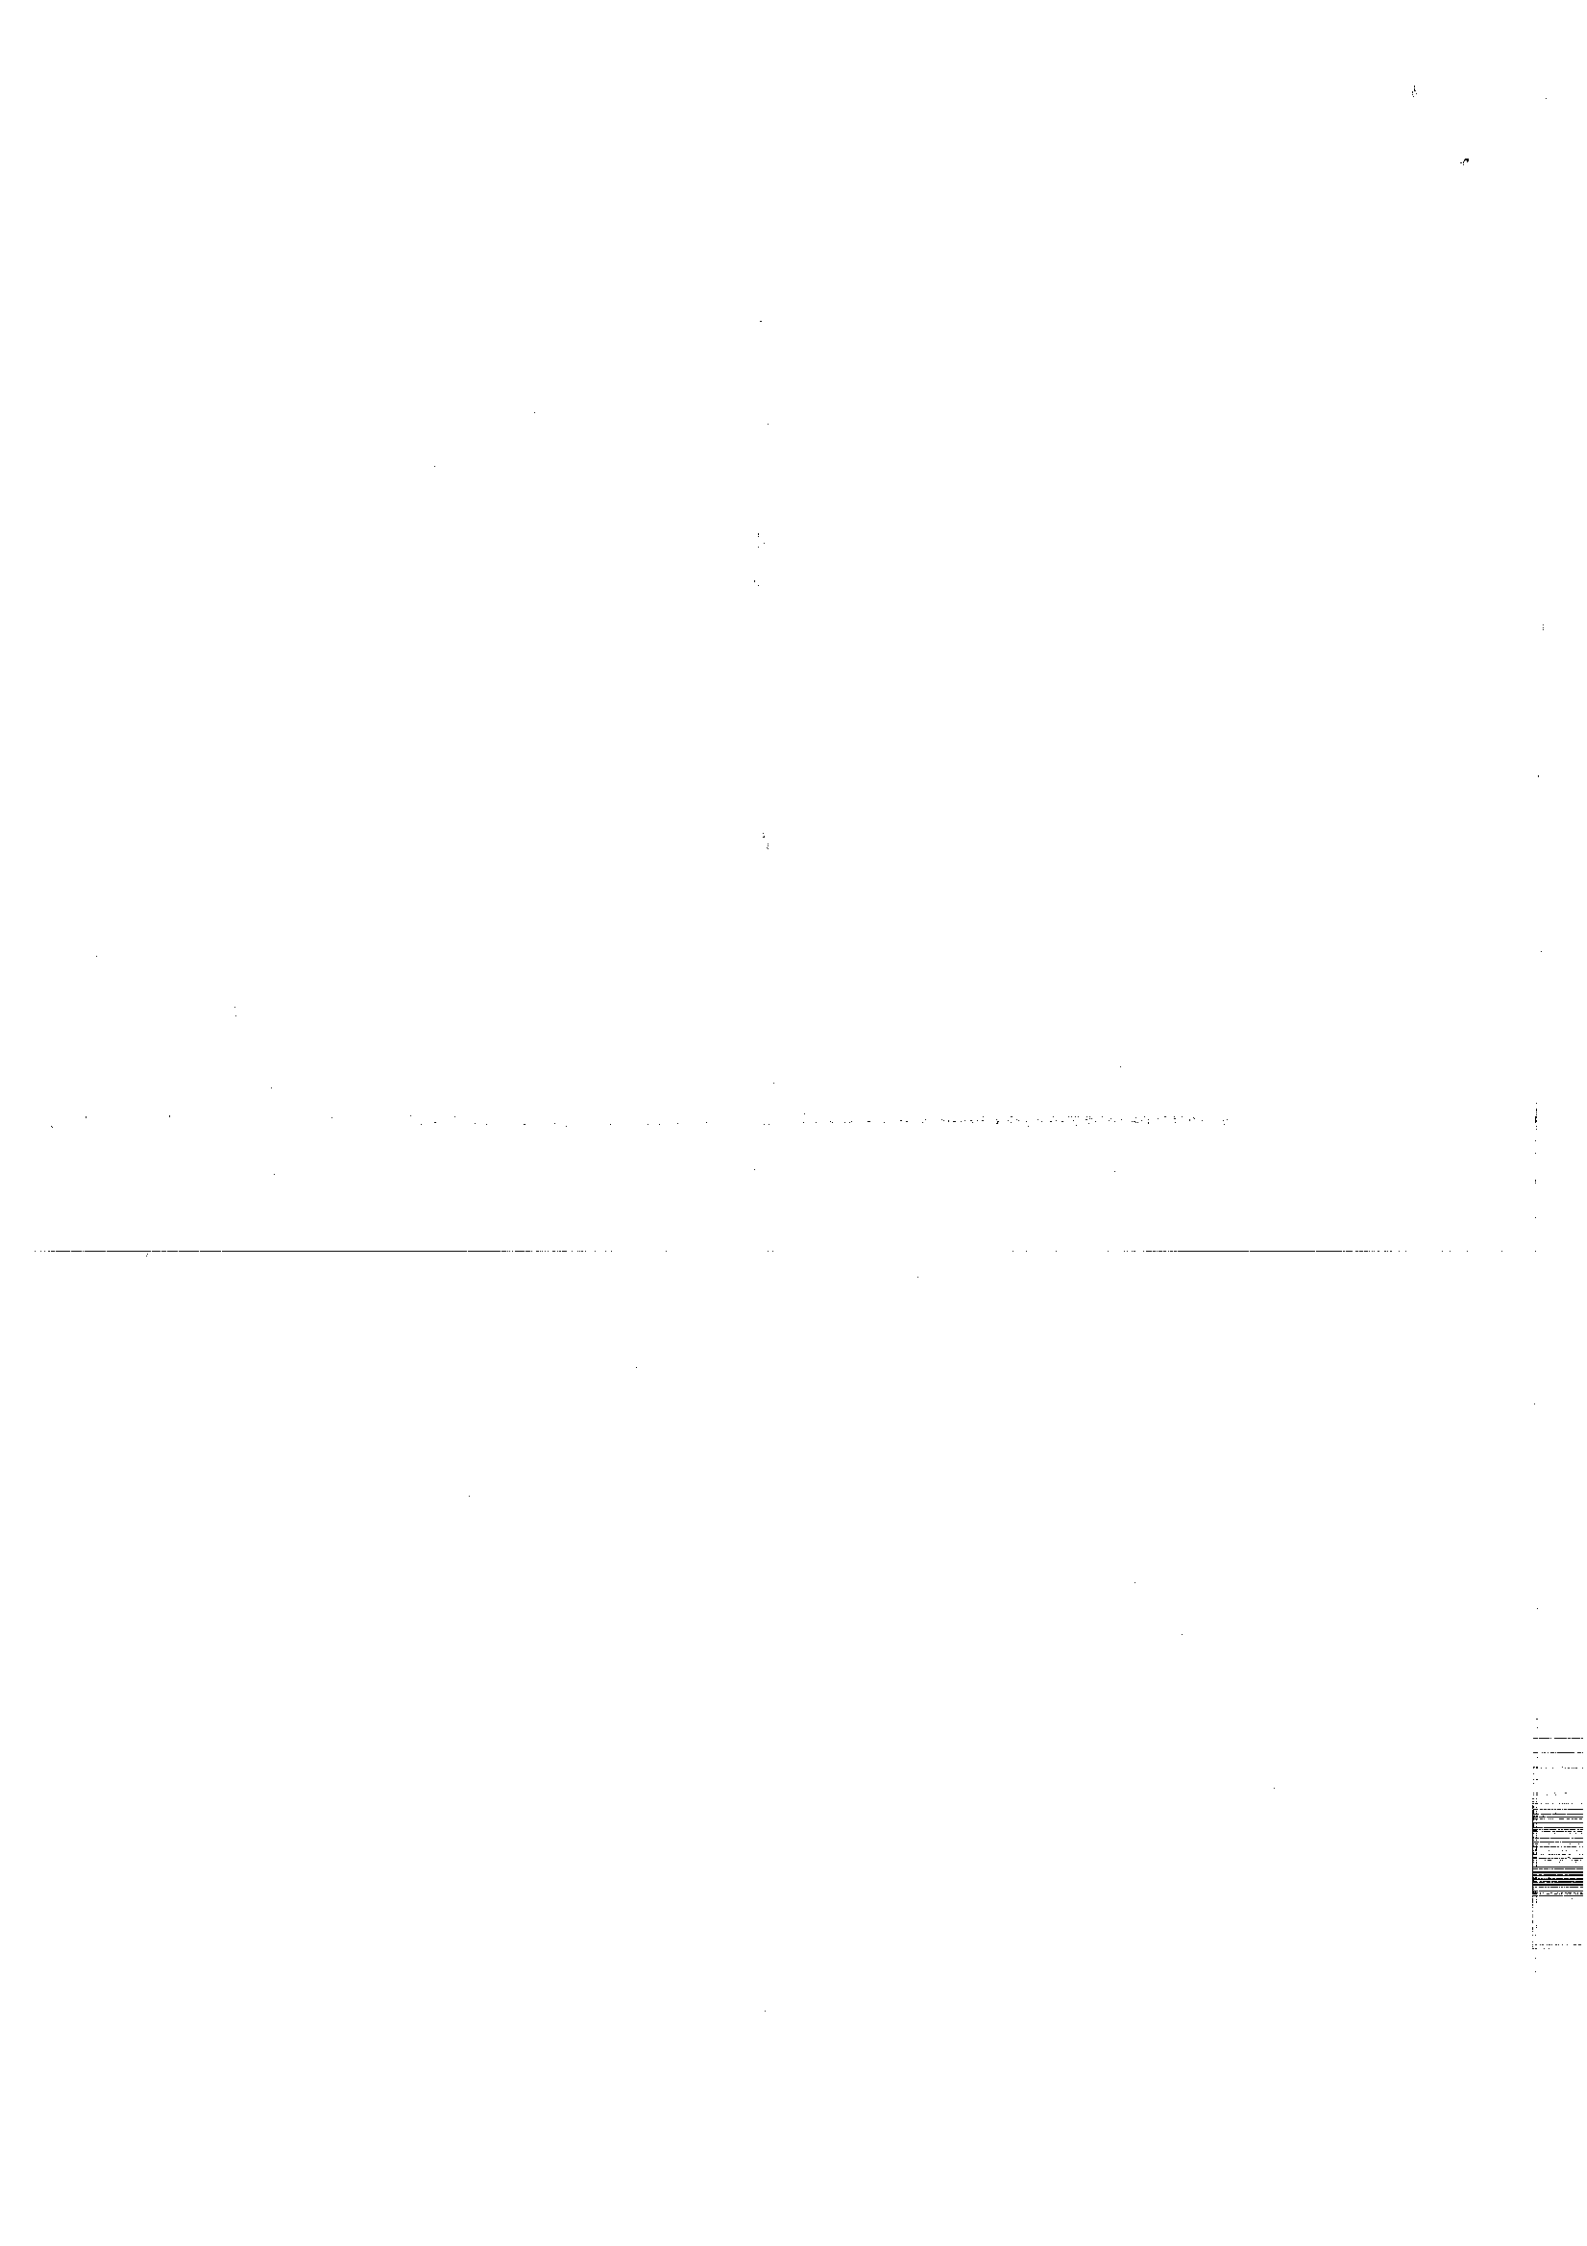

(14 mark)

1. The results have been analyzed
2. Inoculation was performed on 25 chickens
3. A trip for the purpose of collecting insects was made in July 2002.
4. Extensive genetic variation among strains was identified using DNA microarrays.
5. In this study a non-equilibrium approach was used to discriminate between sequences
6. The thief was shot down in the shop's backyard.
7. The investigation of the cytochrome p450-dependent drug metabolism was carried out using a microsomal preparation.

The third question: Choose the correct word from those between brackets:

(30 mark)

1. Different types of antibiotics (Affect – Effect) different types of bacteria in different ways.
2. The (Affect – Effect) of antibiotics are both concentration-dependent and time-dependent.
3. Lower respiratory tract infections are the leading cause of death (among – between) all infectious diseases.

4. No differences in mortality were found (among – between) the experimental subjects and controls.
5. These clusters are (compose – consist) of paralogous genes, which are probably the products of local gene duplications.
6. Signs of overdose (e.g – i.e.) slow heartbeat, blue lips or fingertips, deep snoring or gurgling require immediate action.
7. Hypoglycemia ((e.g – i.e.), fasting glucose < 4.0 mmol/l) is a medical emergency.
8. Women reported (fewer – less) adverse effects than men. (fewer – less) fluid formed in the pleural space of treated animals.
9. The experienced colonoscopist was able to reach much (farther – further) than the trainee.
10. A large (percent – percentage) of patients developed complications.
11. The (principle – principal) that the simplest explanation for a phenomenon is the best one is called Occam's razor.
12. The fellowship (that – which) was advertised in Molecular Genetics has been filled.
13. We used custom-designed virulence arrays to try to understand the high genotypic (variation - variability) in streptococci.
14. We compared normalization methods for high density oligo nucleotide array data based on (variance- varying) and bias.
15. The garden snail gets (its – It's) helical shape through the process of torsion.

The fourth question: Suggest concise alternatives to these wordy constructions: (10 mark)

1. bring to a conclusion
2. carry out the calibration of
3. conduct an investigation
4. make an adjustment in
5. make an assumption that
6. obtain estimates of
7. perform the analysis
8. reach the conclusion that
9. in close proximity to
10. in as much as
