Re: EB11065

Stability of three-dimensional dust acoustic waves in a dusty plasma with two opposite polarity dust species including dust size distribution

by S. K. El-Labany, W. F. El-Taibany, and E. E. Behery

Dear Dr. El-Taibany,

We thank you for submitting this paper to Physical Review E. We would like to inform you that we have selected Figure 2 from this paper to be displayed on our journal web site as part of our "Kaleidoscope" (<http://pre.aps.org/>).

All figures published in Physical Review E are eligible for selection by the editors for display on our web site; we choose figures on aesthetic merit. Recently published images will appear on the main web page for approximately one month, after which they will remain available in an archive.

We hope that you are pleased to have one of your figures selected. The image may be modified and some scales, legends, or labels may be removed. Sometimes, only a part of the original figure will be used.

The figure will be identified by the title of your manuscript, and there will be a link to your published paper as part of the final image page.

Yours sincerely,

Brant M. Johnson  
Associate Editor
